

The GLE- and GLK-range from Frigor offers temperatures down to  $\pm 45^{\circ}\text{C}$  and  $\pm 60^{\circ}\text{C}$  in sizes from 130 to almost 500 liters net volume.

A low temperature laboratory Frigor chest freezer will cover the needs of laboratories, hospitals and the food industry for preservation of products at very low temperatures. Optimum product durability is therefore ensured. The temperature is easily monitored in the digital display. Setting and programming is also done with the electronic thermostat.

Frigor offers the possibility of a potential free contact on the back of the cabinet as an option.

The insulation of 100 mm ensures that in case of a power cut the temperature will only rise very slowly.
